U.S. Citizen

EDUCATION

University of Wisconsin–Milwaukee

Bachelor of Science in Computer Science

Milwaukee, WI

Dec 2024

SKILLS

Languages: SQL, Python, Java, JavaScript/TypeScript, HTML/CSS

Databases & Web: PostgreSQL, MySQL, SQLite, Supabase, Spring Boot, Django, React, Node.js, REST APIs

Infrastructure & Tools: AWS (EC2, RDS, S3), Linux/Unix, Nginx, VM Creation, Server Configuration, Git, Docker, Agile/Scrum

EXPERIENCE

Software Engineering Fellow

2024

CodePath - Partnership with Microsoft, Amazon

Remote

- Completed **50+** algorithm and data structure challenges using **Python**, developing strong understanding of **data structures, algorithms** and **object-oriented** design principles through collaborative coding sessions and technical mock interviews

PROJECTS

Ora - Cloud Storage Manager | *Java (Spring Boot), React, PostgreSQL, AWS*

[GitHub](#) | [Demo Video](#)

- Developed a web-based application that connects to a **PostgreSQL database**, implementing data access layer with JPA/Hibernate to write and retrieve file metadata, user data and authentication information
- Designed and implemented a **relational database schema** with normalized tables, using JPA/Hibernate to interact with PostgreSQL through data access queries for retrieval, insertion, updates and deletion operations
- Built Spring Boot application with **REST API endpoints** that pull data from PostgreSQL database and serve it to the web frontend for display and reporting
- Created and configured **AWS EC2 virtual machine (VM)** and **RDS PostgreSQL database** server, performing **server setup** and software installation (Java, Nginx) on Linux for production deployment
- Used **SSH key pairs (.pem files)** for secure server access and configured application connections between an EC2 instance and an RDS database

Collaborative Study Platform | *JavaScript (SvelteKit), PostgreSQL, Supabase, Docker*

[GitHub](#) | [Demo Video](#)

- Built a web application that connects to a **PostgreSQL database** via **Supabase**, writing **SQL queries** in Supabase SQL Editor to store and retrieve user profiles, flashcard data and quiz results
- Implemented data retrieval system using **SQL SELECT queries** to pull data from database for displaying user content, analytics dashboards and learning progress reports
- Worked as a member of a development team using **Agile/Scrum methodology**, participating in sprint planning, daily standups, code reviews and retrospectives to deliver features collaboratively
- Configured the development environment using Docker for consistent software installation and deployment across team members

TA Scheduling Application | *Python (Django), SQL, SQLite*

[GitHub](#)

- Built a web-based application with a 5-person team using **Python Django** and a **SQLite database** to manage course schedules, user assignments and enrollment data, using Git for version control and collaboration
- Designed **database schema** with foreign key relationships and constraints, implementing data models for users, courses and assignments with proper normalization
- Implemented **data retrieval using Django ORM** to pull data from SQLite database for displaying course schedules, user assignments and administrative reporting views
